

Week 2 Progress Report

Intern Name: Khadija Ayub

Project: Employee Management System Dashboard

Week: Week 2

Objective

Extend the Employee Management Dashboard by implementing complete Employee CRUD operations, responsive forms, client-side validation, and improved user interaction using React.

Tasks Completed

- Designed and implemented a responsive Employee Form using controlled React components.
- Included multiple input types including text fields, dropdown menus, radio buttons, date picker.
- Implemented strict client-side validation for required fields, email format, salary greater than zero, and other input constraints.
- Displayed user-friendly field-level validation messages and prevented invalid form submissions.
- Implemented Add Employee functionality with automatic ID generation and instant table updates.
- Implemented Update Employee functionality by loading selected employee data into the form and saving changes.
- Implemented Delete Employee functionality with immediate UI updates.
- Added success messages after successful add and update operations.
- Enhanced the Employee Table with action buttons, salary formatting, responsive layout, and an empty-state message.
- Improved the overall UI with responsive styling, hover effects, spacing, and modern design.

React Concepts Practiced

useState, useEffect, Controlled Components, Props, Callback Props, State Lifting, Conditional Rendering, Dynamic Rendering using map(), Event Handling.

JavaScript Concepts Practiced

map(), filter(), Spread Operator, Object Manipulation, Arrow Functions, Ternary Operator, Form Events.

Challenges Faced

Passing data between components for updating employees, synchronizing form state, handling validation alongside success messages, and updating React state without mutating existing data.

Outcome

Successfully developed a fully functional Employee Management module featuring Create, Read, Update, and Delete (CRUD) operations, responsive forms, strict client-side validation, success notifications, and a responsive employee table.

Next Week Goals

Implement employee search, filtering, sorting, and prepare the project for backend API integration.
